**For the Evaporation practical (Thursday)**

- The notebooks we will use during the course can be found here: https://github.com/hectornieto/tseb-workshop-2026. To run them on laptops you need Python and install all the required packages as detailed on the readme page: https://github.com/hectornieto/tseb-workshop-2026#installation.
- In addition, we will demonstrate the use of Sen-ET OpenEO toolbox (https://github.com/DHI/sen-ET-OpenEO-toolbox). The installation instructions are again in the readme page (https://github.com/DHI/sen-ET-OpenEO-toolbox#installation) but for the package to work you should be registered on https://dataspace.copernicus.eu/, including for openEO and Jupyter Hub services.
