

Assimilative ecosystem modelling to support environmental monitoring and assessment

Usage of EO data

Ina Lorkowski (ina.lorkowski@bsh.de)
Frank Janssen

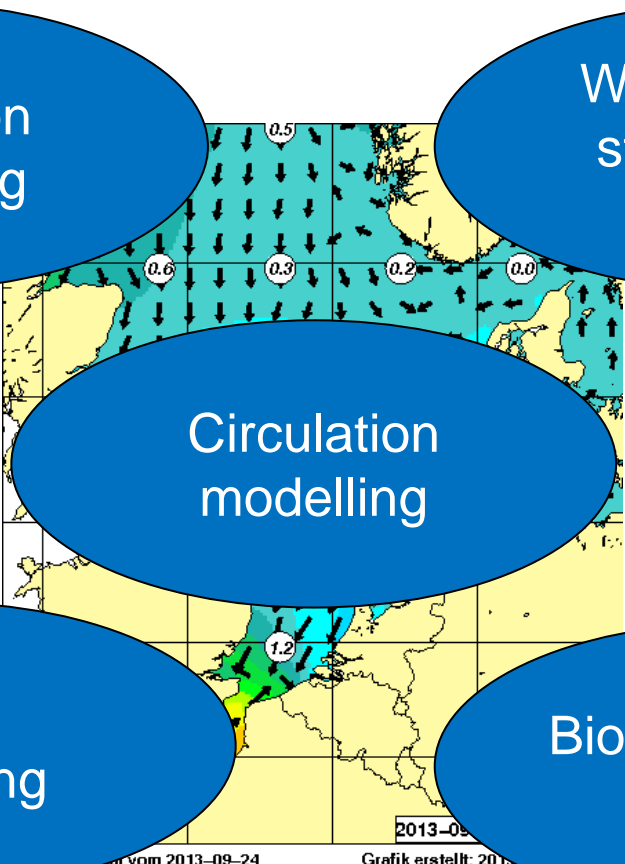

BSH: Tasks and services

Main applications

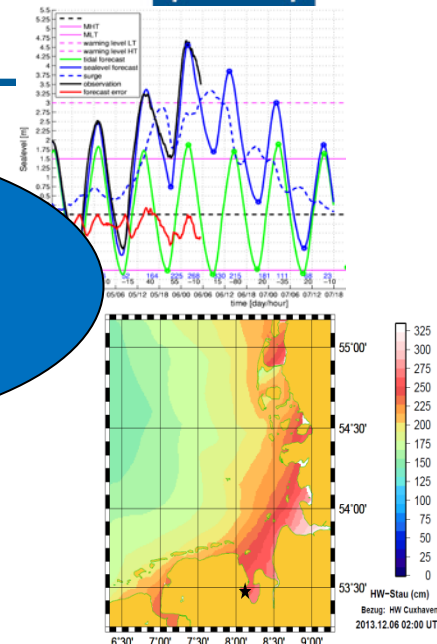

Dispersion modelling

Drift modelling

Water level & storm surge modelling

Biogeochemical modelling

Motivation for biogeochemical modelling

- Information about biogeochemical and physical status of the marine environment important for different purposes
 - Public Authorities
 - Stakeholders
 - Companies
 - Public
- Provide operational data sets for support of marine management plans (MSFD) and conventions (OSPAR, HELCOM)
- Provide information for events of public interest, e.g. algae blooms, oxygen deficit, ...
- **Combine in-situ data, model data and earth observation data by validation and data assimilation to provide high quality data sets for users**

Biogeochemical modelling development at BSH

- 2007 to 2009 ECOOP
 - ECOHAM for the North Sea, ERGOM for the Baltic Sea
 - Hindcast runs
- 2012 to 2015 DeMarine2
 - Funded by DLR, consortium with AWI and Brockmann consult
 - ERGOM with HBM for the North and Baltic Sea
 - Hindcasts runs for 2008
 - Daily pre-operational runs, results archived and uploaded on ftp of project partners, daily figures (intranet)
 - First data assimilation tests

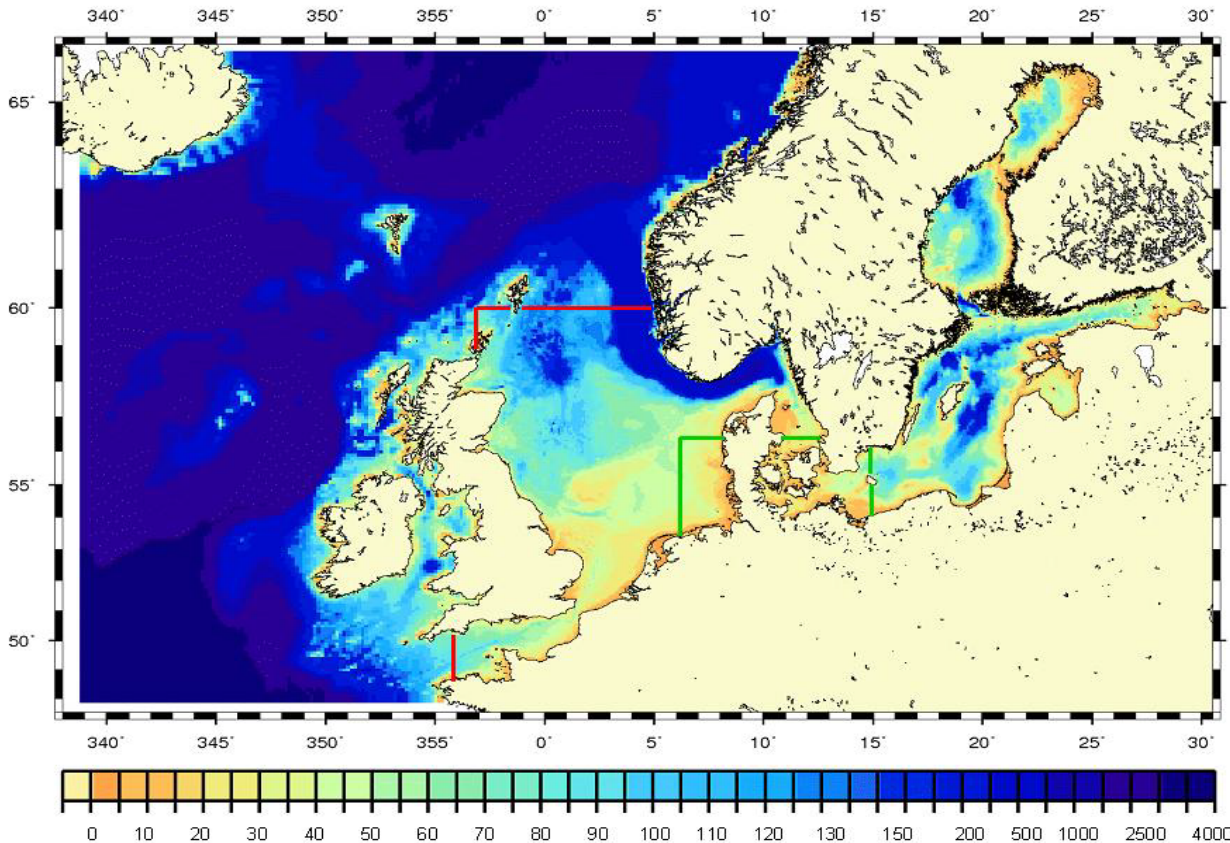

History of biogeochemical modelling at BSH

- Since 2014 CMEMS
 - Part of Copernicus World (with circulation model already from beginning of MyOcean)
 - Backup for MyOcean/Copernicus
 - Daily forecast
 - Development of HBM-ERGOM ongoing
- Since 05/2016 MeRamo
 - Funded by DLR, consortium with AWI, HZG, IOW
 - Usage of Sentinel data for assimilation
 - Aiming at providing information directly usable for the Marine Strategy framework directive

Modell system at BSH

- 5 km
- 900 m

Meteorology from DWD
Boundary conditions
Riverinput
Atmospheric deposition

Longitude

Product qualification

- Using PDAF (Nerger & Hiller 2013)
- combination of model and observation (e.g. SST)
- Correction depends on error estimates
- Model error and covariances from ensemble estimates

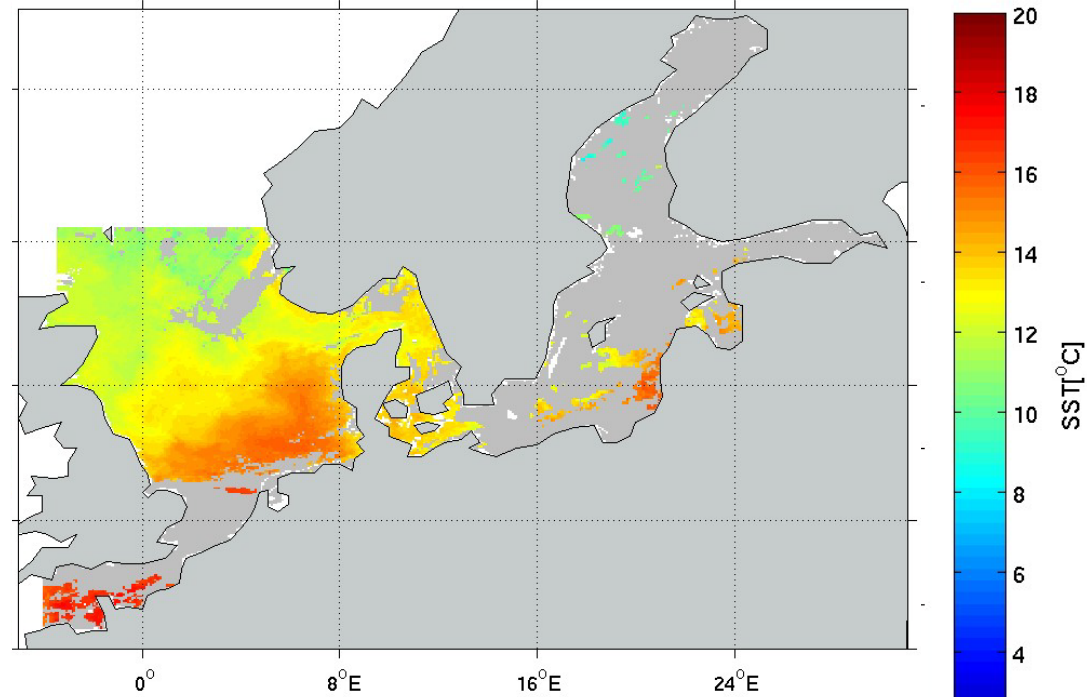

Dataassimilation SST

Model SST 2.10.2007

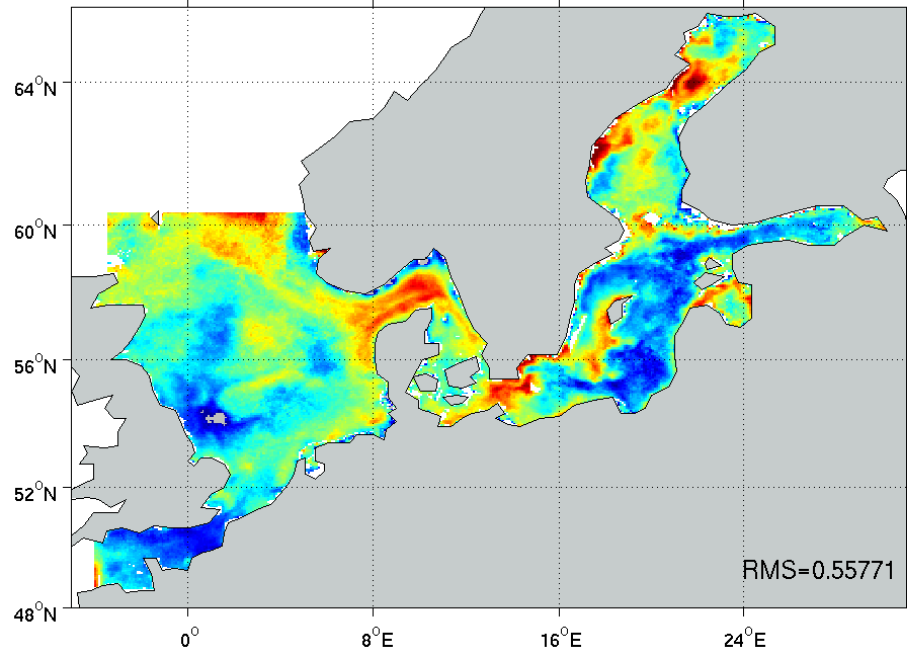

Satellite SST 2.10.2007

Losa et al.
2012, Losa et al.
2014

Dataassimilation SST

Bias estimates for SST forecast over 01 - 27.10.2007 (without data assimilation)

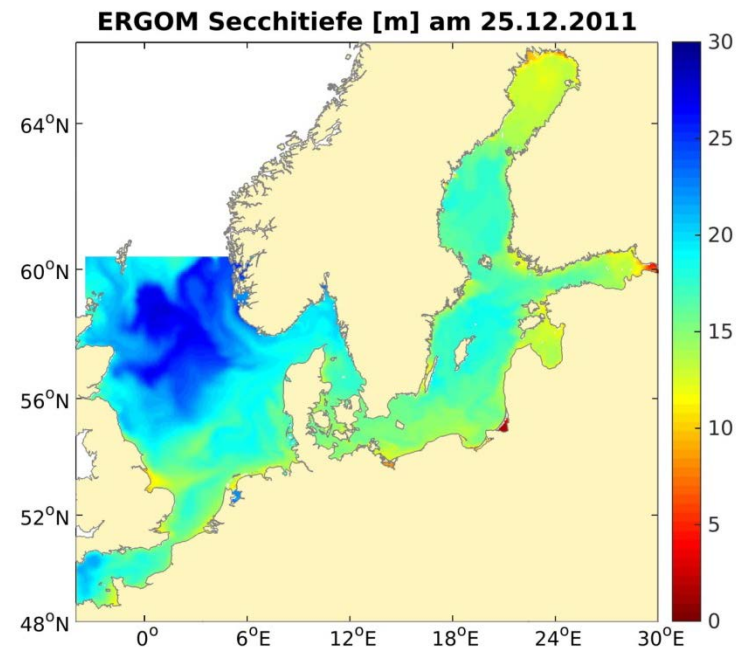

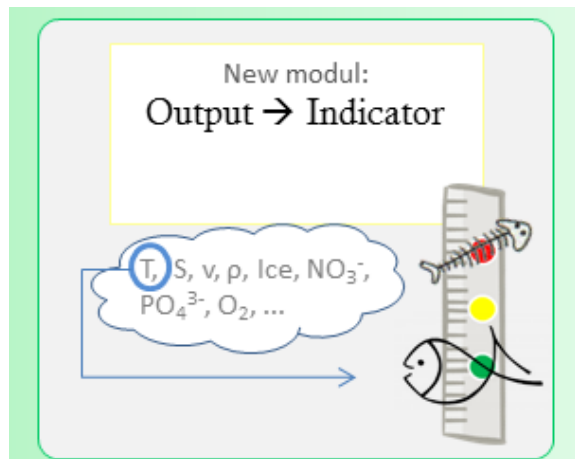

Bias estimates for SST ensemble forecast over 01 - 27.10.2007

Current project MeRamo

- Since 5/2016
- Funded by national aeronautics and space research centre (DLR)
- In cooperation with AWI, IOW and HZG
- Focus on assimilation of Sentinel data into biogeochemical model
- Specific output modul to support reporting for the Marine Strategy Framework Directive

Thank you!
